WORK SAMPLE PORTFOLIO

Annotated work sample portfolios are provided to support implementation of the Foundation – Year 10 Australian Curriculum.

Each portfolio is an example of evidence of student learning in relation to the achievement standard. Three portfolios are available for each achievement standard, illustrating satisfactory, above satisfactory and below satisfactory student achievement. The set of portfolios assists teachers to make on-balance judgements about the quality of their students’ achievement.

Each portfolio comprises a collection of students’ work drawn from a range of assessment tasks. There is no predetermined number of student work samples in a portfolio, nor are they sequenced in any particular order. Each work sample in the portfolio may vary in terms of how much student time was involved in undertaking the task or the degree of support provided by the teacher. The portfolios comprise authentic samples of student work and may contain errors such as spelling mistakes and other inaccuracies. Opinions expressed in student work are those of the student.

The portfolios have been selected, annotated and reviewed by classroom teachers and other curriculum experts. The portfolios will be reviewed over time.

ACARA acknowledges the contribution of Australian teachers in the development of these work sample portfolios.

THIS PORTFOLIO: YEAR 6 MATHEMATICS

This portfolio provides the following student work samples:

Sample 1 Number: Power
Sample 2 Number: How tall?
Sample 3 Number: Abstract design
Sample 4 Number: Fractions, decimals, percentages and integers
Sample 5 Number: Fifth term
Sample 6 Measurement: Area
Sample 7 Number: Calculations
Sample 8 Geometry: 3D structure
Sample 9 Number: Percentages
Sample 10 Geometry: Sam’s square
Sample 11 Statistics and probability: Spinner mania
Sample 12 Measurement: Fill it up
Sample 13 Number: Brackets and the order of operations
Sample 14 Geometry: Understanding angles

COPYRIGHT

Student work samples are not licensed under the creative commons license used for other material on the Australian Curriculum website. Instead, you may view, download, display, print, reproduce (such as by making photocopies) and distribute these materials in unaltered form only for your personal, non-commercial educational purposes or for the non-commercial educational purposes of your organisation, provided that you retain this copyright notice. For the avoidance of doubt, this means that you cannot edit, modify or adapt any of these materials and you cannot sub-license any of these materials to others. For further information, refer to http://www.australiancurriculum.edu.au/Home/copyright.
This portfolio of student work demonstrates multiplying and dividing decimals by a power of 10 (WS1, WS7) and solving problems involving length and area using decimals (WS2, WS6). The student connects fractions, decimals and percentages as representations of the same value (WS3, WS4). The student describes the use of positive and negative numbers in everyday life (WS4) and calculates the discounted price of sale items (WS9). The student creates a sequence using whole numbers and fractions and explains the rule (WS5). The student performs calculations with whole numbers and decimals using all four operations (WS7). The student draws nets and constructs a prism and a pyramid (WS8) and plots points on a Cartesian plane (WS10). The student uses reasoning to report probability using fractions, percentages and decimals (WS11). The student calculates the volume and capacity of a container (WS12) and creates number sentences using the order of operations and brackets (WS13). The student investigates the relationships between angles on straight lines (WS14).
Number: Power

Year 6 Mathematics achievement standard

The parts of the achievement standard targeted in the assessment task are highlighted.

By the end of Year 6, students recognise the properties of prime, composite, square and triangular numbers. They describe the use of integers in everyday contexts. They solve problems involving all four operations with whole numbers. Students connect fractions, decimals and percentages as different representations of the same number. They solve problems involving the addition and subtraction of related fractions. Students make connections between the powers of 10 and the multiplication and division of decimals. They describe rules used in sequences involving whole numbers, fractions and decimals. Students connect decimal representations to the metric system and choose appropriate units of measurement to perform a calculation. They make connections between capacity and volume. They solve problems involving length and area. They interpret timetables. Students describe combinations of transformations. They solve problems using the properties of angles. Students compare observed and expected frequencies. They interpret and compare a variety of data displays including those displays for two categorical variables. They evaluate secondary data displayed in the media.

Students locate fractions and integers on a number line. They calculate a simple fraction of a quantity. They add, subtract and multiply decimals and divide decimals where the result is rational. Students calculate common percentage discounts on sale items. They write correct number sentences using brackets and order of operations. Students locate an ordered pair in any one of the four quadrants on the Cartesian plane. They construct simple prisms and pyramids. Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students had completed a unit of work on number involving multiplying decimals by multiples of powers of ten. Students were given an open-ended task to relate their reasoning skills to answer the posed problem. Students were given one class lesson to complete the task.
Number: Power

Page 4 of 36

Annotations

Demonstrates an understanding of place value when multiplying decimals by a multiple of 10.

Explains simply how to multiply decimals by multiples of 10.
Number: Power

Annotations

Explains the rule for dividing decimals by multiples of 10.

Calculates division of a decimal by a power of 10.
Number: How tall?

Year 6 Mathematics achievement standard

The parts of the achievement standard targeted in the assessment task are highlighted.

By the end of Year 6, students recognise the properties of prime, composite, square and triangular numbers. They describe the use of integers in everyday contexts. They solve problems involving all four operations with whole numbers. Students connect fractions, decimals and percentages as different representations of the same number. They solve problems involving the addition and subtraction of related fractions. Students make connections between the powers of 10 and the multiplication and division of decimals. They describe rules used in sequences involving whole numbers, fractions and decimals. Students connect decimal representations to the metric system and choose appropriate units of measurement to perform a calculation. They make connections between capacity and volume. Students locate fractions and integers on a number line. They calculate a simple fraction of a quantity. They add, subtract and multiply decimals and divide decimals where the result is rational. Students calculate common percentage discounts on sale items. They write correct number sentences using brackets and order of operations. Students locate an ordered pair in any one of the four quadrants on the Cartesian plane. They construct simple prisms and pyramids. Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students had completed a unit of work on decimals and their connection to the metric system. They had solved problems involving length and area using decimals. Students were asked to use their reasoning skills combined with their mathematical knowledge to solve several problems. They were given one lesson to complete the task as an assessment at the end of the unit.
Number: How tall?

Rachel is taller than 140 cm and shorter than 150 cm.
Daniel is 22 cm taller than Rachel.
Adam is 5 1/2 cm shorter than Daniel.

How tall could each of the three friends be in metres?

141, 142, 143, 144, 145, 146, 147, 148, 149

Rachel
145 cm
Daniel
167 cm
Adam
161 1/2 cm

Are there any other possibilities?
Yes

Calculates height in metres after considering given information.
Number: How tall?

Task 3(b)
The area of a rectangle is 30.75 cm².
What could the side lengths be?

\[ A = L \times W \]

30.75 \( = 1 \times 30.75 \)

- Are there any other possibilities?

Yes

30.75 \( = 3 \times 10.25 \)

And some more

- How do you know you are right?

Because I multiplied and got the area.

Annotations

Calculates two sets of possible dimensions of a rectangle from a given answer.

Explains one step of the process of solving a problem.
Number: Abstract design

Year 6 Mathematics achievement standard

The parts of the achievement standard targeted in the assessment task are highlighted.

By the end of Year 6, students recognise the properties of prime, composite, square and triangular numbers. They describe the use of integers in everyday contexts. They solve problems involving all four operations with whole numbers. Students connect fractions, decimals and percentages as different representations of the same number. They solve problems involving the addition and subtraction of related fractions. Students make connections between the powers of 10 and the multiplication and division of decimals. They describe rules used in sequences involving whole numbers, fractions and decimals. Students connect decimal representations to the metric system and choose appropriate units of measurement to perform a calculation. They make connections between capacity and volume. Students locate fractions and integers on a number line. They calculate a simple fraction of a quantity. They add, subtract and multiply decimals and divide decimals where the result is rational. Students calculate common percentage discounts on sale items. They write correct number sentences using brackets and order of operations. Students locate an ordered pair in any one of the four quadrants on the Cartesian plane. They construct simple prisms and pyramids. Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students had completed a unit of work on equivalent fractions, decimals and percentages. Students were asked to create an abstract design, dividing it into percentage parts and demonstrating a connection with fractions and decimals. Questions were written for the students to help them direct their mathematical thinking.
Number: Abstract design

Can you create an abstract design that is 50% blue, 25% green, 15% purple and 10% pink?

What shape might be best for your design?
Can you express your percentages as fractions and decimals?
How do you know that you are right?
Can you try and design another mural using a different shaped canvas?

How did you know how to separate 10% and 15%?
I know because half of 50% is 25%, then take ten away then you have 15% and 10%.

Annotations

Represents percentages as fractions and decimals.

Represents percentages in different two-dimensional shapes.

Compares the value of percentages.
Number: Fractions, decimals, percentages and integers

Year 6 Mathematics achievement standard

By the end of Year 6, students recognise the properties of prime, composite, square and triangular numbers. They describe the use of integers in everyday contexts. They solve problems involving all four operations with whole numbers. Students connect fractions, decimals and percentages as different representations of the same number. They solve problems involving the addition and subtraction of related fractions. Students make connections between the powers of 10 and the multiplication and division of decimals. They describe rules used in sequences involving whole numbers, fractions and decimals. Students connect decimal representations to the metric system and choose appropriate units of measurement to perform a calculation. They make connections between capacity and volume. They solve problems involving length and area. They interpret timetables. Students describe combinations of transformations. They solve problems using the properties of angles. Students compare observed and expected frequencies. They interpret and compare a variety of data displays including those displays for two categorical variables. They evaluate secondary data displayed in the media.

Students locate fractions and integers on a number line. They calculate a simple fraction of a quantity. They add, subtract and multiply decimals and divide decimals where the result is rational. Students calculate common percentage discounts on sale items. They write correct number sentences using brackets and order of operations. Students locate an ordered pair in any one of the four quadrants on the Cartesian plane. They construct simple prisms and pyramids. Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students completed a unit of work on fractions, decimals, percentages and the connections between them. They also investigated positive and negative numbers in everyday contexts.

Students were given a task to assess their understanding that consisted of two parts:

Part 1: Select two fractions, determine which one has the larger value and explain why.

Part 2: Select three positive numbers and three negative numbers, place them on a number line and use $<$, $>$, $=$ to create number sentences with them.
Number: Fractions, decimals, percentages and integers

Select 2 fractions with different denominators and a numerator which is greater than 1.
(Eg. ½ and %)
Which is larger?

How can you prove you are right?
Can you rename any of your fractions as decimals and/or percentages?

Select 2 fractions with different denominators and a numerator which is greater than 1.
(Eg. ½ and %)
Which is larger?

Eight Sixteenths is larger I know this because when I simplify both fractions they are one third and One Half, one half is larger than one third so there for Eight Sixteenths is the answer.

Eight is the same as 50% and the same as 0.5
Five is the same as 33.3% and the same as 0.3

Seventeen over Twenty Three is bigger because the percentage was larger

Eighty Eight over 200 is 48% or 0.48

Eighty Eight over 200 is 48% or 0.48

Annotations

Compares fractions with unrelated denominators by simplifying.

Represents fractions as percentages and decimals.

Compares fractions by considering their percentage equivalents.
Number: Fifth term

Year 6 Mathematics achievement standard

The parts of the achievement standard targeted in the assessment task are highlighted.

By the end of Year 6, students recognise the properties of prime, composite, square and triangular numbers. They describe the use of integers in everyday contexts. They solve problems involving all four operations with whole numbers. Students connect fractions, decimals and percentages as different representations of the same number. They solve problems involving the addition and subtraction of related fractions. Students make connections between the powers of 10 and the multiplication and division of decimals. They describe rules used in sequences involving whole numbers, fractions and decimals. Students connect decimal representations to the metric system and choose appropriate units of measurement to perform a calculation. They make connections between capacity and volume. They solve problems involving length and area. They interpret timetables. Students describe combinations of transformations. They solve problems using the properties of angles. Students compare observed and expected frequencies. They interpret and compare a variety of data displays including those displays for two categorical variables. They evaluate secondary data displayed in the media.

Students locate fractions and integers on a number line. They calculate a simple fraction of a quantity. They add, subtract and multiply decimals and divide decimals where the result is rational. Students calculate common percentage discounts on sale items. They write correct number sentences using brackets and order of operations. Students locate an ordered pair in any one of the four quadrants on the Cartesian plane. They construct simple prisms and pyramids. Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Throughout the term students had completed several units of work, one on the addition and subtraction of fractions with different denominators and another on creating and identifying patterns in number sequences. Students were given the following question as an assessment of concepts at the end of both units of work.

Kate created a subtraction pattern using fractions with different denominators. If the fifth term in Kate’s pattern was 1, what could her pattern look like?

The teacher asked the following questions to guide students through their thinking and working:

- What is the rule for your pattern?
- How did you work it out?
- What other patterns can you create where 1 is the fifth term?
- Can you convert any of your fractions to decimals?
Number: Fifth term

```
15\frac{3}{4} - \frac{9}{12} = 4\frac{3}{4}  
2 4\frac{3}{4} - \frac{9}{12} = 3\frac{1}{4}  
3 3\frac{1}{4} - \frac{9}{12} = 2\frac{2}{4}  
4 2\frac{3}{4} - \frac{9}{12} = 1\frac{3}{4}  
5 1\frac{3}{4} - \frac{9}{12} = 1
```

The fifth term equals 1.

my pattern was \( \frac{3}{4} \)

\( \frac{3}{4} = \frac{9}{12} \)  \( 3 \times 3 = 9 \)

\( 4 \times 3 = 12 \)  \( 4 \)  \( \frac{9}{12} \)

Annotations

- Creates a subtraction pattern involving mixed numbers and proper fractions with denominators that are multiples of four.
- Calculates the second term incorrectly and does not always write terms of the pattern in simplest form.
- Explains pattern used to create the fifth term of 1.
- Demonstrates an understanding of equivalent fractions.
Measurement: Area

Year 6 Mathematics achievement standard

The parts of the achievement standard targeted in the assessment task are highlighted.

By the end of Year 6, students recognise the properties of prime, composite, square and triangular numbers. They describe the use of integers in everyday contexts. They solve problems involving all four operations with whole numbers. Students connect fractions, decimals and percentages as different representations of the same number. They solve problems involving the addition and subtraction of related fractions. Students make connections between the powers of 10 and the multiplication and division of decimals. They describe rules used in sequences involving whole numbers, fractions and decimals. Students connect decimal representations to the metric system and choose appropriate units of measurement to perform a calculation. They make connections between capacity and volume. They solve problems involving length and area. They interpret timetables. Students describe combinations of transformations. They solve problems using the properties of angles. Students compare observed and expected frequencies. They interpret and compare a variety of data displays including those displays for two categorical variables. They evaluate secondary data displayed in the media.

Students locate fractions and integers on a number line. They calculate a simple fraction of a quantity. They add, subtract and multiply decimals and divide decimals where the result is rational. Students calculate common percentage discounts on sale items. They write correct number sentences using brackets and order of operations. Students locate an ordered pair in any one of the four quadrants on the Cartesian plane. They construct simple prisms and pyramids. Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students had started a unit of work on calculating the area of rectangles. The task was used to assess understanding during the unit so that it could be used to guide the next phase of teaching. The students were required to calculate the area of rectangles and explain their thinking when calculating an area that could be split into rectangles. The students were asked to complete the task in 10 minutes.
Measurement: Area

Annotations

Calculates the area of a rectangle.

Partitions a composite shape into rectangles in order to find its area but does not calculate any unknown side lengths and mistakenly assumes that the smaller rectangle is a square.

Describes a process for calculating the area of a composite shape.

Explain how you solved the problem above.

Firstly I made the compound shape into a square and a rectangle. Secondly I x the length by the width 6×4=24. Thirdly I did 3×3=9 I knew the width was 3 because a square's sides are all the same. Lastly I added my answers together 24+9=33 and 33 would be the area.

Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students had completed several units of work involving problem-solving with addition, subtraction, multiplication and division of whole numbers and decimals. Students on this occasion were given a formal pen and paper test that covered many of the concepts in the unit. They were required to estimate answers and demonstrate their thinking, using addition, subtraction, multiplication and division in single and multi-step problems.
Number: Calculations

Solve these problems.

Addition

a. \( \frac{4.7}{2.6} = \frac{73}{6.7} \)

b. \( \frac{14.5}{3.6} = \frac{53.2}{5} \)

Subtraction

a. \( \frac{8}{3.4} = \frac{4.8}{0.1} \)

b. \( \frac{8}{3.4} = \frac{51.6}{6} \)

Multiplication

a. \( \frac{3.7}{4.8} = \frac{14.8}{6} \)

b. \( \frac{2.4}{6} = \frac{151.6}{6} \)

Division

a. \( 8 \div 5.6 = 1.4 \)

b. \( 5 \div 4.7 = 0 \)

Multiply these decimals by 10, 100 and 1000. Estimate first.

Annotations

Calculates addition and subtraction problems involving decimals.

Performs calculations involving the multiplication of decimals by whole numbers but with an error.

Calculates answers to problems involving the division of decimals by whole numbers.

Uses knowledge of powers of 10 to multiply and divide decimals.
Mathematics

Number: Calculations

For the following operations you are required to complete three steps.
1. Estimate an answer and explain how you arrived at your estimate.
2. Calculate an answer.
3. Comment on whether your answer appears reasonable.

Addition
a. 

My estimate is $4.11
How did you get your estimate?

2 \times 3 + 4 + 2

Is your answer reasonable? Explain

I find my answer reasonable because it is only $2.45 away from my estimate.

Subtraction
b. What is the difference between 3.4 and 7.171?

My estimate is 4
How did you get your estimate?

3 - 7

Is your answer reasonable? Explain

I say that my answer is reasonable because my answer was only 3.71% away from my estimate.

Annotations

Provides estimations when calculating with decimals.
Demonstrates strategy used in estimating the calculation of decimals.
Calculates the addition of numerous decimals.
Number: Calculations

c. Multiplication

My estimate is 126
How did you get your estimate?

18 x 7

141.25

126

252.5

Is your answer reasonable? Explain.

I believe that my answer is unreasonable because my answer is 252.5 away from my estimate, which was 126.

d. Division

My estimate is 25.825
How did you get your estimate?

8 ÷ 20.7

25.85

232.65

258.5

0.2585

Is your answer reasonable? Explain.

My answer was unreasonable because I was $232.65 away from my estimate, which was 25.85.

Annotations

Estimates using whole numbers.

Multiplies a decimal by a single-digit whole number but makes an error.

Compares estimation and calculated answer and states the reasonableness of estimation.

Divides a four-digit whole number by a single-digit whole number to obtain a decimal answer but makes an error.
Mathematics Year 6
Satisfactory
2014 Edition
Page 21 of 36

Number: Calculations

Annotations

Solves everyday multiplication problems involving decimals.

Solves written problems using multiple steps and operations.

You and your friends are going to the movies and it’s your shout. Look at the price list below and use a multiplication strategy of your choice to answer the following questions. Show your thinking:

a. How much will it cost you for 4 "Under 13" tickets?

\[ \begin{align*}
\text{Ticket prices} & \\
\text{Under 13} & \quad \$10.50 \\
\text{Adult} & \quad \$14.50 \\
\text{Refreshments} & \\
\text{Popcorn} & \quad \$2.50 \\
\text{Drink} & \quad \$2.50 \\
\text{Chocolate bar} & \quad \$1.95 \\
\text{Choc top} & \quad \$3.25 \\
\text{Water} & \quad \$1.95 \\
\text{Chips/Crisps} & \quad \$2.95
\end{align*} \]

\[ \begin{align*}
\text{Under 13} \times 4 & \quad \$42.00 \\
\text{Cost} & \quad \$7.00
\end{align*} \]

b. Two of your friends each want a large drink and a medium popcorn. What will that cost you?

\[ \begin{align*}
\text{Drink} & \quad \$2.50 \\
\text{Popcorn} & \quad \$3.50 \\
\text{Total} & \quad \$7.00
\end{align*} \]

c. You and your other friend want a choc top and a large drink each. What will that cost?

\[ \begin{align*}
\text{Choc top} & \quad \$3.25 \\
\text{Drink} & \quad \$2.50 \\
\text{Total} & \quad \$5.75
\end{align*} \]

d. Halfway through the movie, you are all dying of thirst and you go out and buy 4 bottles of water. You pay for them with a $20 note. How much change do you receive?

\[ \begin{align*}
\text{Water} & \quad \$1.95 \\
\text{Total} & \quad \$7.80
\end{align*} \]

\[ \begin{align*}
\text{Change} & \quad $9.20
\end{align*} \]
Geometry: 3D structure

Year 6 Mathematics achievement standard

The parts of the achievement standard targeted in the assessment task are highlighted.

By the end of Year 6, students recognise the properties of prime, composite, square and triangular numbers. They describe the use of integers in everyday contexts. They solve problems involving all four operations with whole numbers. Students connect fractions, decimals and percentages as different representations of the same number. They solve problems involving the addition and subtraction of related fractions. Students make connections between the powers of 10 and the multiplication and division of decimals. They describe rules used in sequences involving whole numbers, fractions and decimals. Students connect decimal representations to the metric system and choose appropriate units of measurement to perform a calculation. They make connections between capacity and volume. They solve problems involving length and area. They interpret timetables. Students describe combinations of transformations. They solve problems using the properties of angles. Students compare observed and expected frequencies. They interpret and compare a variety of data displays including those displays for two categorical variables. They evaluate secondary data displayed in the media.

Students locate fractions and integers on a number line. They calculate a simple fraction of a quantity. They add, subtract and multiply decimals and divide decimals where the result is rational. Students calculate common percentage discounts on sale items. They write correct number sentences using brackets and order of operations. Students locate an ordered pair in any one of the four quadrants on the Cartesian plane. They construct simple prisms and pyramids. Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students had completed a unit of work on shape that involved constructing nets, three-dimensional objects and identifying two-dimensional shapes within three-dimensional objects.

The task was given to the students the week after they had finished the unit of work to assess their knowledge of three-dimensional objects. Students were asked to construct the net of a prism and a pyramid and create the object using straws. This task took several lessons to complete.
Geometry: 3D structure

Design and build a three dimensional structure

Design your structure here

Add a photo of your completed structure here

Describe the design features of your structure here

My structure is a three dimensional

- House, with a cube and a
- Square based pyramid, my cube was
- 8 vertices and my square based
- Pyramid has 15 vertices, my structure
- Is made out of 16 straws and
- Sticky tape.

Annotations

Identifies the number and type of three-dimensional objects to make their structure.

Constructs a three-dimensional object using a prism and a pyramid.

Identifies some features of the three-dimensional object.

Draws a two-dimensional representation of a three-dimensional object.
Number: Percentages

Year 6 Mathematics achievement standard

The parts of the achievement standard targeted in the assessment task are highlighted.

By the end of Year 6, students recognise the properties of prime, composite, square and triangular numbers. They describe the use of integers in everyday contexts. Students calculate common percentage discounts on sale items. They write correct number sentences using brackets and order of operations. Students locate an ordered pair in any one of the four quadrants on the Cartesian plane. They construct simple prisms and pyramids. Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students had completed several units of work on fractions, decimals and percentages. One component was to calculate percentages of whole numbers, typically using shopping items on sale. Students were given the task to complete during a lesson.
Number: Percentages

6. Explain how you would calculate 20% of 250.

It would convert 20% to a common fraction \(\frac{1}{5}\).
Next I would divide the bottom number of the fraction by 250. \(\frac{50}{250} = 50\)

7. Calculate the discounted prices for these items.

<table>
<thead>
<tr>
<th>Item</th>
<th>Discount</th>
<th>Original Price</th>
<th>Discounted Price</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>10% off</td>
<td>$300</td>
<td>$30</td>
</tr>
<tr>
<td>b</td>
<td>25% off</td>
<td>$200</td>
<td>$50</td>
</tr>
<tr>
<td>c</td>
<td>75% off</td>
<td>$120</td>
<td>$30</td>
</tr>
<tr>
<td>d</td>
<td>20% off</td>
<td>$50</td>
<td>$10</td>
</tr>
<tr>
<td>e</td>
<td>50% off</td>
<td>$60</td>
<td>$30</td>
</tr>
</tbody>
</table>

Annotations

Explains how to calculate a common percentage of a quantity with some accuracy.

Calculates the amount of sale discount using common percentages but makes some errors when calculating the new price after the discount.
Geometry: Sam’s square

Year 6 Mathematics achievement standard

The parts of the achievement standard targeted in the assessment task are highlighted.

By the end of Year 6, students recognise the properties of prime, composite, square and triangular numbers. They describe the use of integers in everyday contexts. They solve problems involving all four operations with whole numbers. Students connect fractions, decimals and percentages as different representations of the same number. They solve problems involving the addition and subtraction of related fractions. Students make connections between the powers of 10 and the multiplication and division of decimals. They describe rules used in sequences involving whole numbers, fractions and decimals. Students connect decimal representations to the metric system and choose appropriate units of measurement to perform a calculation. They make connections between capacity and volume. They solve problems involving length and area. They interpret timetables. Students describe combinations of transformations. They solve problems using the properties of angles. Students compare observed and expected frequencies. They interpret and compare a variety of data displays including those displays for two categorical variables. They evaluate secondary data displayed in the media.

Students locate fractions and integers on a number line. They calculate a simple fraction of a quantity. They add, subtract and multiply decimals and divide decimals where the result is rational. Students calculate common percentage discounts on sale items. They write correct number sentences using brackets and order of operations. Students locate an ordered pair in any one of the four quadrants on the Cartesian plane. They construct simple prisms and pyramids. Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students had completed a unit of work on integers and coordinates.

At the end of the unit they were given the task to complete during one lesson. Teacher questioning with task:

- Are there other possibilities?
- Is there a pattern in your answers?
- How will you record your responses?
- What if he created other types of quadrilaterals? What would the coordinates be?
Geometry: Sam’s square

Sam plotted one point in each quadrant of a Cartesian plane. When he drew lines joining the points, they formed a square. What could the coordinates be?

\[(2, 2), (2, -2), (-2, 2), (-2, -2)\]

\[\text{They make a square.} \]

\[\text{You could make more squares as long as you choose the same numbers.} \]

Annotations

Calculates the coordinates for a square on the Cartesian plane.

Explains that there are more possible answers with simple logic.

Plots a square on the Cartesian plane.
Statistics and probability: Spinner mania

Students locate an ordered pair in any one of the four quadrants on the Cartesian plane. They construct simple prisms and pyramids. Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students had completed lessons on relating probability to fractions, decimals and percentages so they could calculate the theoretical probability of an event occurring.

Students were asked to create a spinner using colours so that the colours had an unequal chance of occurring when it was spun. They were asked to calculate the probability of each colour being spun and then spin the spinner a number of times and record the observed frequency of each colour. Students were asked to graph the expected results and the observed results and then compare and explain any differences.
Statistics and probability: Spinner mania

Annotations

Describes probability using percentages.

Connects percentages, fractions and decimals.

Uses tally marks to record results of a chance experiment.

Compares expected frequencies with observed frequencies and attempts to explain the results.

Draws a side-by-side column graph to compare expected frequencies with observed frequencies.
Statistics and probability: Spinner mania
Measurement: Fill it up

Year 6 Mathematics achievement standard

Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students were asked to explain how to measure the capacity of a snap lock bag. When they had explained their reasoning, they were asked to measure the capacity and make a connection with volume.
Measurement: Fill it up

**Annotations**

- Explains how to calculate the volume of a snap lock bag.

- Explains how to measure the capacity of a snap lock bag.

---

**a.** I will fill up the bag with 1cm³ cubes. After the bag is full, I will take out the cubes and count them. That will give me the answer.

**b.** I fill the bag up with water. After the bag is full, I will pour the water into a measuring cup, and the amount of water will give me the answer.
Number: Brackets and the order of operations

Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students had completed a unit of work on the order of operations and brackets. At the end of the unit, students were given an open-ended assessment task to demonstrate their understanding. The questions asked were:

- What different number sentences can you create that equal 35?
- Can you include brackets and order of operations in your number sentences?
- Can you explain the rules for the order of operations?
- Can you now try and create number sentences that equal 11?
- How do you know each of your number sentences is right?
- Can you use any decimals?
Number: Brackets and the order of operations

What different number sentences can you create that equal 35?

\[
\begin{align*}
5 \times 7 &= 35 \\
70 \div 2 &= 35 \\
30 + 5 &= 35 \\
60 - 25 &= 35 \\
40 - 5 &= 35 \\
\end{align*}
\]

Can you include brackets and order of operations in your number sentences?

\[
\begin{align*}
(2 \times 20) - (2 \times 2) &= 35 \\
(6 \times 4) + (5 \times 2) + (2 + 1) &= 35 \\
(7 - 2) + (15 \times 2) &= 35 \\
\end{align*}
\]

Can you explain the rules for order of operations?

- Brackets
- Orders
- Division
- Multiplication
- Addition
- Subtraction

Can you now try and create number sentences that equal 11?

\[
\begin{align*}
(1 \times 20) - (1 \times 2) &= 11 \\
60 - (2 \times 20) + 5 - (7 \times 5) - (2 \times 2) &= 11 \\
\end{align*}
\]

How do you know each of your number sentences is right?

The number sentences are correct if they are computed using BIDMAS, like mine.

Can you use any decimals?

\[
\begin{align*}
(2 \times 2) + (15 \times 2) &= 35 \\
(3.5 \times 2) \times (2.5 \times 2) &= 35 \\
(4 \times 5) + (0.5 \times 4) &= 11 \\
\end{align*}
\]

Annotations

Generates number sentences using a range of different operations.

Uses brackets to indicate the order in which the operations must be performed in the number sentence.

Explains the order of operations.

Uses brackets to indicate which operations need to be performed first.

Explains a strategy to check that working is correct.

Uses brackets to indicate which operations must be performed first and multiples decimals by a one-digit number.
Year 6 Mathematics achievement standard

The parts of the achievement standard targeted in the assessment task are highlighted.

By the end of Year 6, students recognise the properties of prime, composite, square and triangular numbers. They describe the use of integers in everyday contexts. They solve problems involving all four operations with whole numbers. Students connect fractions, decimals and percentages as different representations of the same number. Students calculate common percentage discounts on sale items. They write correct number sentences using brackets and order of operations. Students locate an ordered pair in any one of the four quadrants on the Cartesian plane. They construct simple prisms and pyramids. Students list and communicate probabilities using simple fractions, decimals and percentages.

Summary of task

Students were given a diagram that consisted of a pair of parallel lines and another line that intersected the parallel lines. They were given the size of one of the angles formed and asked to calculate the size of all of the other angles without using measurement. They were asked to explain their reasoning.
Geometry: Understanding angles

Annotations

- Demonstrates understanding that angles on a straight line add up to 180°.

In the above diagram angle α = 144°. Can you, without a protractor, work out the size of all the other angles?

Please explain your reasons.

Yes, I can because I know 180° has to equal 180° so I just figure out how much more I need. And I knew that corresponding angles equal the same number. Alternate angles equal the same number. Opposite angles equal the same number.
