Conclusion 24
Key Terms and Definitions 25
References 26
1. The draft *Shape of the Australian Curriculum: Civics and Citizenship* provides broad direction on the purpose, structure and organisation of an Australian curriculum for Civics and Citizenship. It is intended to guide the writing of the Foundation to Year 12 *Australian Curriculum: Civics and Citizenship*.

2. This paper has been prepared following analysis of national forum consultation feedback on the *Civics and Citizenship Curriculum Initial Advice Paper* (2012) and ACARA Board advice.

3. The paper should be read in conjunction with *The Shape of the Australian Curriculum* v3.0 available at [http://www.acara.edu.au/verve/_resources/The_Shape_of_the_Australian_Curriculum_V3.pdf](http://www.acara.edu.au/verve/_resources/The_Shape_of_the_Australian_Curriculum_V3.pdf)
4. The *Australian Curriculum: Civics and Citizenship* will contribute to achieving the educational goals identified in the *Melbourne Declaration on Educational Goals for Young Australians* (2008, pp. 8-9) and will set out what young people need to learn and be able to do in order to become active and informed citizens in Australia and globally. It will do this by specifying content descriptions and achievement standards, guided by a rationale and a set of aims. In delivering the *Australian Curriculum: Civics and Citizenship*, education authorities, schools and teachers will decide on the most appropriate organisational approaches and pedagogy to achieve these aims.

5. Civics and Citizenship education is uniquely positioned to provide opportunities for young people to become active and informed citizens. It presents exciting and challenging opportunities for school authorities, schools and teachers to prepare students for adult citizenship, both as part of the formal school curriculum and as part of a wider whole-school program. This could include participation in experiences external to the school but linked to the school curriculum (for example, community activities, parliamentary education programs, civic institution visits and electoral commission programs).

6. The *Australian Curriculum: Civics and Citizenship* will provide essential learning for young Australians to be active, informed citizens in their democracy and an increasingly interconnected world. To achieve this, the Civics and Citizenship curriculum will consist of two organisational strands — knowledge and understanding and skills — underpinned by values, attitudes and dispositions to participate in civic life.

7. The key knowledge, understandings and skills in the *Australian Curriculum: Civics and Citizenship* will be taught in a range of different contexts. This will provide flexibility and choice for teachers and schools based on local school and community contexts, local civics learning opportunities and available resources. Using a context-based approach will assist in linking Civics and Citizenship learning with other learning areas but requires rigorous consideration of essential content and appropriate contexts.

8. The *Australian Curriculum: Civics and Citizenship* should provide opportunities for all students to develop awareness and understanding of the diverse society in which they live. It will also help students develop inclusive attitudes and beliefs and liberal democratic values and challenge stereotypes based on difference.

9. An *Australian Curriculum: Civics and Citizenship* will consolidate and strengthen links between students and local, national, regional and global communities. The curriculum will provide opportunities for students to engage with communities and civic institutions. This could include students actively participating in community decision-making or contributing to civil society through, for example:

- engagement with community service programs, fundraising for charities and volunteer work
- broader community projects including working with national and international NGOs.
10. The principles that will inform the *Australian Curriculum: Civics and Citizenship* include the following:

a) Democracy in Australia involves a constitution, a well-established representative parliamentary process and a participatory, engaged approach to government. It is grounded in liberal democratic values and a belief in civic duty. If Australian citizens are committed to and participate in civic life, our democracy will be sustained and strengthened.

b) The values on which Australia’s democracy is based include the importance of democracy, active citizenship, the rule of law, social justice and equality, respect for diversity, difference and lawful dissent, respect for human rights, stewardship of the environment, support for the common good, and acceptance of the rights and responsibilities of citizenship.

c) Australia is a multicultural, secular society with a multi-faith population. Young people are members of diverse local, national and global communities, and need opportunities to appreciate and participate in Australia’s multicultural and multi-faith society.

d) Individuals may identify with multiple ‘citizenships’ at any one point in time and over a period of time. Citizenship means different things to people at different times and depending on personal perspectives, their social situation and where they live. This is reflected in multiple perspectives of citizenship that reflect personal, social, spatial and temporal dimensions of citizenship.

e) The preparation of active and empowered citizens includes opportunities for students to apply democratic principles, practise behaviours and to actively engage in practical citizenship activities within schools, in the community and online.

f) Student experience of Civics and Citizenship should be based on the formal curriculum in Civics and Citizenship and a combination of class-based activities, whole-school activities and community activities.
11. The rationale for an *Australian Curriculum: Civics and Citizenship* will be drawn from the following statements:

   a) Civics and Citizenship education involves the development of the knowledge, skills, attitudes, beliefs and values that enable students to effectively participate in community activities and public affairs locally, nationally and globally.

   b) Australia is a multicultural, secular, and multi-faith society, governed through a well-established representative parliamentary process and based on liberal democratic values, principles and practices.

   c) Civics and Citizenship education in schools helps citizens to sustain their democracy. The link between schooling, citizenship and democracy is enshrined in every set of Australian education goals, most recently in Goal 2 of the *Melbourne Declaration on Educational Goals for Young Australia* (MCEEDYA, 2008), which states that all young Australians should become active and informed citizens [who]:
   - act with moral and ethical integrity
   - appreciate Australia’s social, cultural, linguistic and religious diversity, and have an understanding of Australia’s system of government, history and culture
   - understand and acknowledge the value of Indigenous cultures and possess the knowledge, skills and understanding to contribute to, and benefit from, reconciliation between Indigenous and non-Indigenous Australians
   - are committed to national values of democracy, equity and justice, and participate in Australia’s civic life
   - are able to relate to and communicate across cultures, especially the cultures and countries of Asia
   - work for the common good, in particular sustaining and improving natural and social environments
   - are responsible global and local citizens.

   d) The key to Australia’s democracy is informed citizens who actively take part in their community in the context of liberal democratic values, institutions and systems of government. If Australian citizens are committed to and participate in civic life, our liberal, representative democracy, built on a constitution and the supremacy of parliament, will be sustained and thrive. Historically it has been shown that without the participation of informed and responsible citizens, democracy is weakened and cannot function effectively.
e) Children in schools are citizens but they need opportunities to build their understanding and experience to become active adult citizens. The school plays an essential role in the provision of opportunities for preparing active, informed citizens to ensure the continuation of Australia’s parliamentary, liberal democracy.

f) Participation of citizens takes place at many levels – within the home/family, classes, within schools, within workplaces, within communities, within our nation and internationally. To be effective, citizens require knowledge and understanding of the rights and responsibilities of citizenship, of the political and legal institutions and processes and of the principles and values that underpin Australian democracy. They also need the associated and necessary supporting skills, values, attitudes and dispositions to become active citizens who can participate in communities at local, national, regional and increasingly global levels.
12. An *Australian Curriculum: Civics and Citizenship* will contribute to the general educational aims set out in *The Shape of the Australian Curriculum* v3.0. Its principal task is to assist students to develop the civic knowledge, understanding and skills to enable them to engage purposefully at local, national, regional and global levels now and in the future.

13. An *Australian Curriculum: Civics and Citizenship* will:

   a) develop the knowledge, skills, attitudes, values and dispositions students need to fully participate in civic life as active citizens in their communities, the nation, regionally and globally

   b) develop knowledge and understanding of, and commitment to, Australia’s liberal, representative democracy, legal system and civic life, including an understanding of Australia’s democratic heritage

   c) develop a critical appreciation of the rights and responsibilities of citizenship and civic life nationally and globally, including the capacity to act as informed and responsible citizens and to critically examine values and principles that underpin Australia’s liberal democracy

   d) build an understanding and appreciation of Australia as a multicultural and multi-faith society and a commitment to human rights and intercultural understandings, with particular consideration of Aboriginal Peoples’ and Torres Strait Islander Peoples’ historical and contemporary experience of, participation in and contribution to Australian civic identity and society.
14. **Civics** is defined broadly as ‘an identifiable body of knowledge, skills and understandings relating to the organisation and working of society, including Australia’s political and social heritage, democratic processes, government, public administration and judicial system’. This definition, prepared in 1994 for the Civics Expert Group, remains relevant today but needs to be extended to include local, regional and global perspectives.

15. **Citizenship** is a complex concept that has been extensively discussed and debated over the centuries. Formally, citizenship refers to the legal link between an individual and a state. More broadly, citizenship is the state of being a citizen of social, religious, political or community groups, locally, nationally and globally, which carries with it both rights and responsibilities, duties and privileges, and which is guided by social values and encouragement of active participation. In the Australian Curriculum citizenship incorporates three components – civil (rights and responsibilities), political (participation and representation) and social (social values and community involvement). In its application in schools, citizenship provides opportunities for students to engage in activities as a member of a group, to address problems and issues for themselves and positively influence social outcomes that are relevant to their lives now and in the future.
16. Active and informed citizenship includes a cognitive domain (knowing, understanding and reasoning) and a behavioural domain (engagement, skills and behaviours), both influenced by an affective domain (values, attitudes and dispositions). School activities concerned with the development of citizenship relate to all three of these domains.

17. Over the past two decades in Australia and internationally, there has been a broadening of the concepts, processes, and practices in Civics and Citizenship education. In particular there has been an increased emphasis on the role of active citizenship, both as explicit content and as a key outcome of Civics and Citizenship education.

18. The two organisational strands of an Australian Curriculum: Civics and Citizenship will be Civics and Citizenship knowledge and understanding and Civics and Citizenship skills.

19. The knowledge, understandings and skills of Civics and Citizenship are underpinned by values, attitudes and dispositions that are the foundation of Australia’s parliamentary liberal democracy and responsible civic action, and include:

   a) the values that are the foundation of liberal democracy and parliamentary representative democracy, such as freedom of expression, government by the people, equality, the rule of law, equality before the law, fair and effective representation, responsibility, accountability and common good

   b) the foundations of civil behaviour and civic duty in a modern democracy, including appreciation and support, care and compassion, respect for cultural identity and diversity, religious tolerance, fairness, social justice, human dignity, freedom, civility, honesty, respecting others’ rights and views, responsibility, inclusiveness, equality, sustainability, appreciation of difference, peace, giving and contributing and valuing involvement as active citizens

   c) the dispositions, that is the inclination of an individual to behave in a manner that is informed by the knowledge, skills, values and attitudes acquired as an active, democratic citizen, such as:
      - participating in the political community
      - volunteering to be active in the community
      - participating in civil society, and community life with a focus on social and global issues
      - engaging in activities to improve society, guided by civic values and attitudes.
Civics and Citizenship knowledge and understanding

20. The important knowledge and understanding developed in an Australian Curriculum: Civics and Citizenship will be drawn from the following:

a) Key elements and institutions of the Australian political system and the processes of parliamentary government at state, national and international levels including how governments and parliaments are elected and formed; levels and roles of government; concepts of power, leadership and community service.

b) Principles and values underpinning Australia’s liberal, representative democracy, including the key features of the Australian Constitution, the role of democracy in building a socially cohesive and civil society and ways in which individuals, groups and governments make decisions, including checks and balances in the political system.

c) Knowledge of the cultures, social and political processes and laws of Aboriginal and Torres Strait Islander Peoples.

d) Knowledge of other political systems, how democracy functions in other societies and Australia’s obligations to others.

e) Key elements of Australia’s legal system and legal processes including the purpose of laws, constitutional principles, legal rights and responsibilities, the rule of law, and the ways in which Australia’s legal system contributes to democratic principles, rights and freedoms.

f) Rights and responsibilities of citizens, including human rights, political rights, social rights and duties, as well as the right to dissent, critique and communicate.

g) The role of the media and information and communication technologies in personal, political and social life including social media and online communication, and the ways in which they are used by individuals and governments to exert influence and the influence of those sources on civic debate and citizen engagement.

h) The role and contribution of major religions and beliefs and voluntary, community, interest and religious groups, associations and clubs to civic life and to the development of civic identity.

i) Multidimensional citizenship and the influence of local, state, national, regional and global events, perspectives and cultural diversity on government policy and on civic identity.
Civics and Citizenship skills

21. The set of skills that will enable students to be active and engaged as well as informed and critical participants in their multiple communities:

a) Inquiry and research

This involves, for example, inquiring and investigating information and ideas, using research skills in reviewing literature and collecting data, questioning existing situations; preparing reports and critiquing research.

b) Analysis and synthesis

This involves, for example, evaluating a position or decision, taking a position, and defending a position; distinguishing a statement of fact from an opinion; interpreting and critiquing media messages, including the interests and value systems that are involved; monitoring policies and decisions; synthesizing research data; understanding and coping with ambiguity.

c) Collaborative problem-solving and decision-making

This involves, for example: displaying interest and skill in decision-making, solving problems and resolving conflict resolution through collaboration and demonstrating intercultural competence.

d) Communication

This involves, for example: presenting ideas in oral and written form; critical reading, debating, writing and listening; applying empathic and social skills; using both traditional and social media (Twitter, blogs, Facebook and so on) and the internet in socially constructive ways as communication tools in modern democracy.

22. These skill areas are critical to the inquiry process, and aim to support students in becoming active, informed and critical citizens.

23. As part of a broader social inquiry process, these align closely with the skill sets in other Australian Curriculum humanities subjects (see table below).
## Organisation of the Civics and Citizenship Curriculum

Overview

24. The Civics and Citizenship curriculum will be developed from Years 3 to 10. It is assumed that all students will be taught Civics and Citizenship across Years 3–8. In Years 9–10 students will have the opportunity to continue their study of Civics and Citizenship, so they may deepen their understanding in preparation for senior secondary study in the humanities or other areas.

25. The Australian Curriculum has been developed so that it can be taught within 80 per cent of the available teaching time. With this in mind, a notional time allocation of 20 hours per year will be used as a guide by the writers as they develop the Civics and Citizenship curriculum.

26. The curriculum focus outlined for Civics and Citizenship learning is cumulative in nature and is intended to build depth of student knowledge and understanding and sophistication of skills over the years of schooling. In the context of an Australian democracy it builds on the understanding of empowering students to be active citizens now as well as in the future.

27. A Civics and Citizenship curriculum must take into account the development of children to adolescence and adulthood. As children develop through the years of primary school they are increasingly able to understand and appreciate the concepts and more abstract ideas embedded in Civics and Citizenship. They begin to appreciate different points of view and can maintain engagement with tasks for longer periods of time. Thought processes become more conceptual and consistent, with learners drawing upon a broader range of experiences to inform their thinking. Students increasingly look for and value learning that helps explain broader aspects of their world.

28. During the phases of schooling students should be encouraged to become increasingly active in forms of citizenship participation, from class and whole school activities to community and global projects. The following sections provide guidance for curriculum writers as to what content and skills should be addressed at each phase.

29. Children, including young children, are citizens. The Early Years Learning Framework (EYLF) recognises the importance of children connecting with people and place, being effective social communicators and using skills to access information, investigate ideas and represent their thinking. In Years F–2, the Australian Curriculum builds on the EYLF. The outcomes for children include developing a strong sense of identity and wellbeing, being connected with, and contributing to, their world, becoming confident and involved learners and becoming effective with their social interaction. The EYLF has
a specific focus on play-based learning and recognises children’s rights to be active
participants in all matters affecting their lives.

30. There will not be curriculum developed for Years F–2 as part of the Australian
Curriculum: Civics and Citizenship. Through other learning areas and subjects, however,
students will have opportunities to learn about ‘rules’ as part of the school
ethos/classroom setting, develop their interpersonal and communication skills, and their
understanding of, for example, differences in family structures and roles, understand the
importance of cultural heritage and learn how people are connected to other places and
how they care for places.

31. The transition from primary to secondary school coincides with a range of significant
personal, biological and social changes. Students further develop the propensity to
question established conventions, practices and values. Their interests extend beyond
their own communities and they develop concerns about wider issues. The Civics and
Citizenship curriculum should provide opportunities to engage with these changes.

32. The middle and senior secondary years of schooling can also be seen as a period of
empowerment for, and transition to, adult citizenship. Students have a clearer sense of
their strengths, interests and goals. They begin to see themselves as active players in
community life and are often concerned about national and international social and
environmental issues and the ethical implications of human activity and knowledge.

33. The design of the Australian Curriculum for Years 9 and 10 recognises that many
students commence senior secondary pathways and programs in these years. The
Australian Curriculum is designed to provide increased opportunities for students to
make choices about learning pathways and to deepen their understanding in each
learning area. In Years 9 and 10 there is flexibility for students to undertake more
specialised learning pathways that ensure all students are fully engaged and prepared to
continue learning into the senior secondary years.

**Years 3–4**

Years 3 to 4 (typically 8–10 years of age)

34. During these years of schooling, students are progressively engaging with a wider breadth
of ideas. They begin to understand and recognise different points of view and can
maintain engagement with tasks for longer periods of time. Students become more aware
of different perspectives and draw upon a broader range of experiences to inform their
thinking and decision-making. Students increasingly engage with and value learning that
helps explain broader aspects of their civic world.
35. Students can begin to appreciate and understand concepts of law, rules, power, government, freedoms, cooperative decision-making, rights and responsibilities, media and other Civics and Citizenship concepts at an appropriate level. They are able to develop the skills and values associated with Civics and Citizenship, such as care and compassion, cultural identity and diversity, religious tolerance, fairness, human dignity, freedom, honesty, respecting others rights, being responsible, inclusiveness, equality and peace.

36. In Years 3–4, the Civics and Citizenship curriculum will take into account civics and citizenship in local and national communities (with extension to regional and global communities) for a range of purposes, including for community-based activities. Students will continue to apply knowledge developed in other areas of learning in an integrated manner.

**Years 5–6**

*Years 5 to 6 (typically 10–12 years of age)*

37. During these years, students continue to develop a better understanding and appreciation of different points of view and an awareness of justice and fair play. They increasingly engage in discussions about community and national issues, with a focus on contemporary issues, in order to consider why and for whom decisions are made. They have a broader awareness of global issues, such as human rights and Australia’s relationships with other countries.

38. In Years 5–6, the Civics and Citizenship curriculum will take into account a broader focus on civics concepts in the context of local, national, regional and global communities and the skills that enable active citizenship in these contexts. The content will provide opportunities for students to develop knowledge and understanding of the processes of government and democracy (the working of parliaments, how government functions, how political decisions are made, the rule of law and how courts function) and to examine civic issues more critically.

39. The curriculum will provide opportunities for students to engage in practical Civics and Citizenship activities such as voting in, and standing for, elections in school, and participative site-based activities such as parliament, law court and electoral education centre visits. Students can identify key issues in their community and society more broadly and, as part of building their skills for active citizenship, identify the relevant local institutions that make decisions about a range of issues.
Years 7–10

Years 7 to 8 (typically 12–14 years of age)

40. During these years, students develop a broader awareness of, and concern with, civics and citizenship issues. Students are developing their capacities to think, act and solve problems progressively on the basis of wider community concerns rather than individual interests. They can work with more abstract concepts, follow more complex explanations, and enjoy debating ideas. Students develop increasing independence in critical thinking and skill application, and have more awareness of ethical issues. They can begin to appreciate the connections between the polity, culture, environment and development.

41. In Years 7 and 8 the Civics and Citizenship curriculum will continue to cover the local and national, with a greater emphasis on regional and global perspectives than in Years 5–6. Students learn to make independent judgments about information and develop some understanding of a range of political systems, with particular emphasis on liberal representative democracy and the role of constitutions. Understanding the role of media from a critical perspective is important, as well as being able to question, investigate and evaluate messages from different media sources including social media.

42. The curriculum will provide opportunities for students to learn about an increasing range of approaches to decision-making and the associated consequences, and to engage in a range of problem-solving activities in school and community contexts. The Civics and Citizenship curriculum will focus on identified sets of citizenship skills and the values, attitudes and dispositions that underpin those skills. These values include: the importance of and practice of democracy; active citizenship; the rule of law; a belief in social justice and the equal treatment of citizens; respect for differences including gender and religious differences and acceptance of and respect for human rights (equality, dignity and freedom).

Years 9 to 10 (typically 14–16 years of age)

43. During these years, students increasingly engage in activities about global, national and community issues, with a focus on more complex contemporary issues as they consider why and for whom decisions are made at different levels. They can work both independently and collaboratively, using a range of skills and processes, selecting and using appropriate information and research methods to suit specific tasks, purposes and contexts.
44. The curriculum will enable problem-solving activities that are sophisticated, acknowledge the complexities of contemporary life, and make connections to related everyday issues. Increasingly a global perspective will be evident, with opportunities to understand the complex interdependencies involved in the development of political decisions and civic engagement. This includes understanding of the risks associated with various decision-making processes. Students critique problems, collect and analyse relevant data, generate and communicate ideas, and create and construct possible solutions to everyday civic and political problems.

**Senior secondary (typically 16–18 years of age)**

45. During these years, students engage with more advanced topics of politics and law, investigating international problems and understanding the complexities of these problems, including the associated ethical issues. These problem-solving activities are sophisticated, acknowledge the complexities of contemporary life and make connections to related subjects such as History and Geography. Students have a more global perspective, with a more sophisticated understanding of the complex interdependencies involved in political decision-making at local, national and international levels.

46. The Civics and Citizenship curriculum will further develop the skills and understanding achieved by the end of Year 10 and will provide opportunities for students to develop knowledge and understanding of other political systems, partly in order to contextualise Australian democracy. It will provide opportunities for students to: explain and critique the constraints of Australian democracy, including interest groups, political parties and the media; develop communication skills including critical reading, debating, writing, critical listening, empathic and social skills; analyse historical events and cultural phenomena; monitor policies and decisions, including those involved in voting; build coalitions and the ability to cooperate to solve problems; demonstrate intercultural competence; and develop research capability, critical reflection and the ability to understand and cope with ambiguity.

47. The senior secondary Civics and Citizenship curriculum will include the study of global politics, as it relates to a more detailed study of Australian politics, and/or legal studies and courts, in the context of the Australian legal system and the Australian Constitution and state constitutions as appropriate.

48. While a general outline is provided here, a more detailed brief will be developed before writing of senior secondary curriculum commences.
49. The Australian Curriculum must be relevant to the lives of students and address the contemporary issues they face. With these considerations in mind, the Australian Curriculum gives special attention to three cross-curriculum priorities:

- Aboriginal and Torres Strait Islander histories and cultures
- Sustainability
- Asia and Australia’s engagement with Asia

Aboriginal and Torres Strait Islander histories and cultures

50. The Australian Curriculum: Civics and Citizenship recognises the importance of the Aboriginal and Torres Strait Islander histories and cultures priority for its capacity to create more informed citizens and contribute to social cohesion and inclusion. The subject will acknowledge the contribution to Australian society and civic life of Aboriginal and Torres Strait Islander Peoples, and recognise them as having the longest continuous histories and cultures in the world.

51. The Civics and Citizenship curriculum will encourage students to learn about Indigenous social and political processes and laws. It will also provide opportunities for students to enhance their understanding of contemporary Indigenous experience of Australia’s legal system and citizenship.

Sustainability

52. The Australian Curriculum: Civics and Citizenship recognises the role of civic and political activity in affecting sustainability. The learning area will address the notion of sustainable patterns of living to meet the needs of the present without compromising the ability of future generations to meet their needs. Actions to improve sustainability are both individual and collective endeavours shared across local and global communities. Actions that support more sustainable patterns of living require consideration of political, environmental, social, cultural and economic systems, and their interdependence.

53. The Civics and Citizenship curriculum will provide students with the knowledge and skills to understand and participate in democratic processes to improve sustainability.
Asia and Australia’s engagement with Asia

54. The *Australian Curriculum: Civics and Citizenship* recognises the importance of the Asia region in the world today, as well as that Australia’s engagement with Asia has the capacity to build understanding and appreciation of diversity in our society and contribute to harmonious local, regional and global communities. The subject will enable students to explore the significant contribution that the peoples and cultures of the Asia region make to our political, social and economic world and the impact that Australia’s involvement in the region has upon Asian societies.

55. The Civics and Citizenship curriculum will provide students with the knowledge and skills to systematically engage with Asia today and for the future. It will enable students to explore and appreciate different approaches to Civics and Citizenship and forms of government in Asian nations.
56. In the Australian Curriculum, the knowledge, skills, behaviours and dispositions that students need to succeed in life and work in the twenty-first century have been identified as general capabilities. Over the course of their schooling, students develop and use general capabilities within and across learning areas and in their lives outside school. General capabilities and learning areas have a reciprocal relationship. Learning areas provide opportunities for students to develop and use general capabilities. Similarly, wherever general capabilities are made explicit in learning areas, they can enrich and deepen learning. In the Australian Curriculum: Civics and Citizenship each of the seven identified general capabilities should be embedded in the content descriptions and/or elaborations where appropriate.

57. The general capabilities are integral to being a citizen and are to be a central part of the Civics and Citizenship curriculum. Every citizen needs, for example, to think and act ethically, to be able to communicate and to think critically and creatively. These capabilities assist students to become engaged citizens in their democracy, using skills to resolve issues, and developing the attitudes, values and dispositions that are the foundations of modern democracies.

**Critical and creative thinking**

58. Students develop capability in critical and creative thinking as they learn to generate and evaluate knowledge, clarify concepts and ideas, seek possibilities, consider alternatives and solve problems. Critical and creative thinking are integral to activities that require students to think broadly and deeply using skills, behaviours and dispositions such as reason, logic, resourcefulness, imagination and innovation in all learning areas.

59. Civics and Citizenship is particularly suited to developing students’ ability to think creatively and critically about political and social issues. This should include opportunities to generate ideas, imagine possibilities and consider alternatives, apply logical and inventive reasoning, draw conclusions and design a course of action against a backdrop of environmental and social needs and concerns. Critical and creative thinking will be developed through topics featuring questions that do not have obvious or straightforward answers. The Civics and Citizenship curriculum will stimulate students to think creatively about the impact that civic issues have on our lives, how they might be addressed, and about possible, probable and preferred futures.
**Personal and social capability**

60. Students develop personal and social capability as they learn to understand themselves and others, and manage their relationships, lives, work and learning more effectively. Personal and social capability involves students in a range of practices including recognising and regulating emotions, developing empathy for and understanding of others, establishing positive relationships, making responsible decisions, working effectively in teams and handling challenging situations constructively.

61. In Civics and Citizenship students should be encouraged to develop and apply personal, interpersonal and social skills, behaviours and dispositions, through working collaboratively and constructively in groups, developing their communication, decision-making, conflict resolution and leadership skills, and learning to appreciate the insights and perspectives of others.

**Ethical behaviour**

62. Students develop the capability to behave ethically as they identify and investigate the nature of ethical concepts, values, character traits and principles, and understand how reasoning can assist ethical judgment. Ethical behaviour involves students in building a strong personal and socially oriented ethical outlook that helps them to manage context, conflict and uncertainty, and to develop an awareness of the influence that their values and behaviour have on others.

63. In Civics and Citizenship students should be encouraged to consider and apply ethical principles in collaborating, sharing and acting with social responsibility. This includes identifying values and rights (based on agreed principles) promoted by groups such as peers, local community groups, corporations and governments. This will involve an exploration of ethical issues, the notion of the common good and the place of national values and human rights. Students should have opportunities to investigate national and global priorities, and to evaluate their findings against the criteria of environmental sustainability, economic viability and social responsibility. By exploring such issues, students develop informed values and attitudes, and become aware of their own roles and responsibilities as present and future citizens.
Intercultural understanding

64. Students develop intercultural understanding as they learn to value their own cultures, languages, religion and beliefs, and those of others. They come to understand how personal, group and national identities are shaped, and the variable and changing nature of culture. The capability involves students in learning about and engaging with diverse cultures in ways that recognise commonalities and differences, create connections with others and cultivate mutual respect.

65. In Civics and Citizenship students should have opportunities to engage with their own cultures, values and beliefs and those of others in local, national, regional and global contexts. They should be given opportunities to explore how people interact across cultural boundaries and to consider how factors such as group membership, traditions, customs and religious and cultural practices impact on the function and form of daily life.

Literacy

66. Students become literate as they develop the knowledge and skills to learn and communicate confidently at school and to contribute to a literate society. Literacy involves students in composing and comprehending spoken language, print, visual and digital texts, and using and modifying language for a variety of purposes and audiences in a range of contexts so they are able to read critically.

67. In Civics and Citizenship students learn to understand and use language to explore, analyse, discuss and communicate information, concepts and ideas related to the subject. This involves learning to recognise how language can be used to manipulate meaning, distinguish between fact and fiction on political and social issues, and communicate ideas, concepts and detailed proposals to a variety of audiences. Communication is critical in Civics and Citizenship, in particular articulating, debating and evaluating ideas and participating in group discussions.

Numeracy

68. Students become numerate as they develop the knowledge and skills to use mathematics confidently across all learning areas at school and in their lives more broadly. Numeracy involves students in recognising and understanding the role of mathematics in the world and having the dispositions and capacities to use mathematical knowledge and skills purposefully.
69. In Civics and Citizenship students apply key numeracy knowledge and skills in relation to a range of political and social theories and practices. Numeracy enables students to use mathematics to analyse and address Civics and Citizenship questions. This includes counting, calculating, approximating and estimating, statistics (for example in relation to polling and voting), measuring and recording throughout the process of idea generation, developing, refining, and testing concepts in political and social contexts. A useful application is in understanding political opinion polls that are central to modern politics.

**Information and communication technology (ICT) competence**

70. Students develop ICT capability as they learn to use ICT effectively and appropriately to access, create and communicate information and ideas, solve problems and work collaboratively in all learning areas at school, and in their lives beyond school. ICT capability involves students in learning to make the most of the technologies available to them, adapting to new ways of doing things as technologies evolve and limiting the risks to themselves and others in a digital environment.

71. In Civics and Citizenship students develop the knowledge and skills to use digital technologies to locate, manage, organise, analyse, represent and present information, and to collaborate, share and exchange information and support thinking and engagement. ICT capability will be particularly important for students in research and in collecting and analysing data related to Civics and Citizenship.
72. The Civics and Citizenship curriculum will maintain close and strong links with other areas of the Australian Curriculum at both primary and secondary levels.

73. The *Australian Curriculum: Civics and Citizenship* will present an opportunity to build on strong synergies with particular humanities and social sciences subjects as well as other learning areas and subjects. The content of the Civics and Citizenship curriculum will take into account related content from other Australian Curriculum subjects, to ensure that unnecessary repetition is avoided and links and potential for integration are maximised.

74. This is particularly the case in Years 5-6, and Years 9-10 History, Geography, Business and Economics, and English. There are multiple opportunities for History in particular to be linked with the content of the Civics and Citizenship curriculum, including the development of Australian democracy and the growth of modern Australian identity.

75. A further key feature of the Civics and Citizenship curriculum will be the links made, in conjunction with other learning areas, with a range of experiences outside the school.
Civics and Citizenship education is designed to provide young people with the confidence, knowledge, understanding and skills to develop their civic identity, live as citizens in their local and wider communities and create a future that will enhance society. The Civics and Citizenship curriculum provides opportunities for students to explore local, national, regional and global issues and priorities that link to a broad cross-section of societal needs. The curriculum may be taught through class-based activities, whole-school activities and community activities in conjunction with activities through the informal curriculum. Civics and Citizenship is characterised by students engaging with and creating solutions for authentic situations and issues. Students will explore scenarios, generate and develop ideas, research and experiment, and problem-solve using their knowledge, skills and understanding of values related to Civics and Citizenship.
Active citizenship is involvement in the civic and political activities of society at local,

Informal curriculum can be defined as those school experiences which are planned to achieve pre-determined outcomes but which are not school subjects. In terms of civic learning, the informal curriculum includes student governance, student newspapers, debating, student clubs and school assemblies, all of which can offer education in civic values together with civic knowledge and skills.

Knowledge implies a conceptual understanding of phenomena including factual understanding (for example understanding, supported by factual knowledge, of parliamentary democracy in one's country and state/local area).

Liberal democracy is an approach to political arrangements that takes the view that the ideal political system should combine majority rule by the people with the protection of the political, legal and social rights of individuals and minority groups.

Multidimensional citizenship accepts that an individual can function with more than one sense of citizenship composed of four dimensions (personal, social, spatial and temporal). In particular, at any one time a person may identify as a 'citizen' of a city, a region, a country and globally.

Parliamentary democracy is a political system based on the idea that parliament is supreme or sovereign. In a parliamentary democracy citizens elect representatives to govern on their behalf. Legislation within parliament is passed by a majority vote and becomes the law of the nation.

Representative democracy occurs where people elect others to represent them in the decision-making process. Representative democracy occurs in parliament where people elect representatives, or members of parliament, to make laws on their behalf.

Rights and responsibilities refers to entitlements and obligations that are associated with citizenship. Rights and responsibilities are a cornerstone of modern democracies. While there are many rights a citizen may enjoy (freedom of speech, the right to vote) there are also responsibilities of citizenship (vote in elections, pay taxes, jury service).

Rule of law is the legal principle that decisions by government are made according to established principles and that all citizens are subject to the law and equal before the law. It includes acceptance by government and the community that all executive action will be constrained and adjudicated by an independent judiciary, subject to due and proper processes. Embedded within the rule of law is the notion that people accept and follow, but also change as needed, laws as agreed by the political process and upheld by independent courts.

Skills means the ability to do something in the civic domain, such as effectively engage with others in public arenas, and engage in critical and creative reflection on all political levels from local to national and international levels.
